YATIN JOSHI

Entry-Level GTM Engineering | Revenue Automation | AI Workflows

Haldwani, Uttarakhand, India • +91 63976 34393 • yatinjoshi972@gmail.com

Portfolio: portfolio-yatin-portfolio1.vercel.app • GitHub: github.com/yatinjoshi05 • LinkedIn: linkedin.com/in/yatin-joshi-86a814363

SUMMARY

BBA graduate with customer-facing sales experience (Maruti Suzuki NEXA internship; independent outreach to local business owners). Built n8n projects covering buying-signal intake, Clay enrichment, rule-based and LLM lead qualification, and HubSpot Customer Relationship Management (CRM) routing. Seeking an entry-level GTM Engineering, Revenue Operations (RevOps) Automation, or Revenue Automation role.

TECHNICAL SKILLS

GTM Technology Stack (used in projects): n8n (orchestration), Clay (enrichment waterfall), HubSpot (CRM tasks and deals), Supabase PostgreSQL (data layer), webhooks, REST/HTTP APIs, Postman

Programming & Data: JavaScript (n8n Code nodes), TypeScript, React, Vite, Git/GitHub, data validation, deduplication (hands-on); Python, Node.js/Express, SQL schemas and migrations (foundational)

AI Integrations: OpenAI and NVIDIA-hosted LLM APIs, structured JSON outputs, rule-gated LLM calls, model fallback (Groq/Gemini)

GTM Concepts: Ideal Customer Profile (ICP) and intent scoring, buying signals, lead scoring and routing, CRM workflows, telemetry

Sales & Communication: Cold outreach, customer needs discovery, objection handling, follow-up, explaining technical solutions to business owners

Ecosystem awareness (studied, not implemented): Apollo (prospecting), Salesforce (CRM), Zapier (app integration)

PROJECTS

NEXUS GTM – Revenue Intelligence & Lead Qualification Engine | n8n, Python, Supabase, OpenAI API, React — Portfolio Project

- Built a pipeline that treats startup funding announcements as potential buying signals and ranks companies for sales research: a Python RSS poller and a webhook gateway feed an n8n qualification workflow.
- Sanitizes inputs and checks a SHA-256 payload hash before any model call to avoid duplicate processing; OpenAI scores ICP fit as structured JSON, with rule-based fallback scoring if the API is unavailable.
- Stores score, tier (1–3), and research summary in Supabase PostgreSQL; an Express/TypeScript API feeds a React dashboard for lead prioritization. 166 automated tests across backend, frontend, and producer.

Revenue Lifecycle Orchestration Engine (RLOE) | n8n, Supabase, Clay, HubSpot, LLM — Portfolio Project

- **Signal ingestion:** 39-node n8n workflow takes website-intent webhooks and a scheduled product-led-growth (PLG) usage poller, transforms payloads in JavaScript, and filters public email domains.
- **Validation, deduplication, enrichment:** Supabase PostgreSQL cache check with a pending-row guard prevents duplicate enrichment; n8n then calls Clay's enrichment waterfall and resumes on its callback webhook. Returning leads skip enrichment and create a HubSpot task.
- **Qualification:** rule-based pre-score gates the LLM (below 35 skips it); qualified leads get structured-JSON ICP and intent scores.
- **CRM routing and telemetry:** score-based routing into HubSpot tasks and deals; latency, token cost, and errors logged to Supabase.
- Scripted tests cover three branches (qualify, low-score gate, duplicate). One run (linear.app, n8n execution 476): ICP 95, intent 85, routed sales_priority, about $0.000129 model cost. Test data, not production.

Content Automation Platform – Multi-Channel AI Workflow Engine | n8n, PostgreSQL, React, Node.js — Portfolio Project

- Designed 16 modular n8n workflows (trend research, packaging, human approval, scheduling, publishing, analytics, error handling) coordinated through a PostgreSQL job queue with skip-locked claims and leases.
- Added Groq-to-Gemini failover with circuit-breaker recovery and a React/TypeScript operations dashboard; YouTube/Meta publishing adapters are mock-tested, not live-verified.

JARVIS OS – Personal AI Desktop Assistant | React, TypeScript, Vite, Tauri, Express — In Development

- Windows assistant prototype: React/TypeScript interface, Express proxy routing across AI providers, a vector-store and knowledge-graph memory module (58 unit tests), and a Tauri desktop shell in progress.

EXPERIENCE

Independent AI Agent & Website Projects | Self-directed — 2024 – Present

- Prospected local business owners through cold outreach and ran needs-discovery conversations to identify problems before proposing AI-agent or website solutions.
- Explained automation in business terms, handled objections, and followed up across multiple conversations.
- Delivered approximately 6–7 AI-agent and website projects for local businesses that came from this outreach.

Intern, Sales & Customer Discovery | Maruti Suzuki NEXA, Haldwani — June 2025 – August 2025

- Engaged and qualified 15–25 walk-in prospects daily through needs discovery and product demonstrations in a target-driven sales environment.
- Maintained customer records and follow-up information; coordinated handoffs to sales executives.

EDUCATION

Bachelor of Business Administration (BBA) | Amrapali University, Haldwani — 2023 – 2026

Higher Secondary (12th), DAV Centenary Public School, Haldwani, 2023 | Participant, National Financial Literacy Quiz, 2025
